

PATIENT INFORMATION

PANTS ID: 1
Age: 66
Sex: F

TECHNIQUE

Multiple axial CT images were obtained. Study type: ct colonography. Contrast: Non-contrast.

IMAGING DETAIL

Spacing: 0.625, 0.625, 0.800
Shape: (512, 333, 200)
Study type: ct colonography
Contrast: Non-contrast

AI MEASUREMENTS

Organ	Volume (cc)	Mean HU
adrenal gland right	3.45	7.7
bladder	49.01	40.7
colon	405.13	-756.7
duodenum	41.55	15.6
kidney left	72.38	22.7
liver	89.20	26.9
lung left	1247.41	-306.5
postcava	16.44	36.0
spleen	79.97	45.2
superior mesenteric artery	59.34	16.1
veins	4.23	40.1

COMMENTS

The right adrenal gland appears to be mildly enlarged, with a notable increase in density suggestive of fatty tissue. The bladder is normal in size. The colon is significantly dilated, indicating possible obstruction or functional impairment. The left kidney is normal in size.

IMPRESSION

- The pancreas is diffusely enlarged with a total volume of 579.94 cc, which is significantly larger than the normal range.
- There are three distinct pancreatic lesions, requiring further evaluation to determine their nature and potential impact on pancreatic function.
- Due to the patient's age and the presence of pancreatic lesions, it is essential to consider the possibility of pancreatic cancer and to schedule a biopsy or other diagnostic procedure to confirm the diagnosis.
- Due to the patient's age and the presence of pancreatic lesions, it is essential to consider the possibility of

pancreatic cancer and to schedule a biopsy or other diagnostic procedure to confirm the diagnosis.
